

Profi Internet

Permanent Internet connection using optical or wireless technologies

The **PROFI INTERNET** service is a permanent Internet connection. It is a complex service that includes installation, access line and the customer premise equipment, and the Internet connectivity.

To provide the connection, Dial Telecom uses optical connections, microwave connections (licensed dedicated band and non-licensed bands) or leased telecommunication lines. Dial Telecom employees choose the suitable connection technology of the end point after careful consideration with respect to availability at the location and demanded capacity.

To optimally solve your Internet connection needs, the **PROFI INTERNET** service has many alternatives from which you may choose, differing from each other mainly by line capacity.
