

# Faxserver

## Complex solution of your fax communication

**FAXSERVER** enables you to receive and send fax messages using the Internet. Incoming fax messages are sent to you in an e-mail attachment. You can send your fax messages directly from your computer using a number of communication channels (e-mail, sending through the website, use of a fax program).

### WHO IS THE SERVICE DESIGNED FOR?

This service is designed for all users of the Dial Telecom voice services.

### THE SERVICE ENABLES

#### • The receipt of faxes

The faxserver converts the incoming fax message into electronic form and delivers it in the PDF format to the predefined email address.

#### • Sending faxes

You can send fax messages directly from your computers using a number of communication channels:

##### • via program

You can use a fax program for free. In the program, you can define address books for sending messages, check the history of outgoing fax messages, or resend a message to the same or another user. The program enables the importing of telephone numbers. It can be also used for group faxing.

##### • via e-mail

You can send faxes the same way you send emails.

##### • via the web

A fax message can be sent simply through a web form, which is available immediately and from anywhere with the Internet access.

### BENEFITS OF THE SERVICE

- your current fax number will remain the same, or we can assign you a new one
- your fax number will never be busy
- work simply with incoming faxes; you can print them out or forward them by email to specific recipients
- each of your employees can be assigned a separate fax number
- you do not need a fixed line or a fax machine
- reliable and secure, thanks to a back-up solution in 2 independent housing centers
- the faxserver supports over 200 various attachment formats

Throw your fax machine away and fax via the Internet.
